CLAIMS

5

- 1. A fuel cartridge for a fuel cell, that is stored with liquid fuel to be supplied to a fuel electrode in the fuel cell and that is attachable and detachable to/from said fuel cell, is characterized in that the fuel cartridge comprises:
- a fuel storage chamber whose an inner surface is made of resin that is resistant to said liquid fuel;
 - a case that contains said fuel storage chamber internally and that is made of impact-resistant resin; and
 - a fuel supply part that is connected to said fuel storage chamber and that supplies said liquid fuel to said fuel cell.
 - 2. The fuel cartridge for the fuel cell according to Claim 1 is characterized in that said inner surface of said fuel storage chamber is made of alcohol-resistant resin.
 - 3. The fuel cartridge for the fuel cell according to Claim 1 or 2 is characterized in that said fuel storage chamber is made of a bag-shaped member that is made of a flexible resin material.
 - 4. The fuel cartridge for the fuel cell according to Claim 1 or 2 is characterized in that said fuel storage chamber and said case are jointly integrated.
 - 5. The fuel cartridge for the fuel cell according to any one of Claims 1 to 3 is characterized in that a cushioning member is arranged between said fuel

storage chamber and said case.

5

- 6. The fuel cartridge for the fuel cell according to Claim 5 is characterized in that said cushioning member includes one material or two or more materials from among natural rubber, isoprene rubber, butadiene rubber, styrene-butadiene rubber, chloroprene rubber, acrylonitrilebutadiene rubber, silicone rubber, butyl rubber, urethane rubber, ethylene propylene rubber, ethylene-vinyl acetate copolymer, foamed polyurethane, silicone gel, and styrene gel.
- 7. The fuel cartridge for the fuel cell according to any one of Claims 1 to 6 is characterized in that the fuel cartridge comprises a pressure adjustment member for adjusting an inner pressure of said fuel storage chamber.
- 8. The fuel cartridge for the fuel cell according to claim 7 is characterized in that said pressure adjustment member includes a gas-liquid separation film.
- 9. The fuel cartridge for the fuel cell according to any one of Claims 1 to 8 is characterized in that the fuel cartridge comprises a vent that passes through said case.
- 10. A fuel cell is characterized in that the fuel cell comprises a fuel cell main body having a fuel electrode and a fuel cartridge for the fuel cell according to any one of Claims 1 to 9, which is stored with liquid fuel to be directly supplied to said fuel electrode.
